NTT DATA

NTT DATA welcomed Dell Services into the family in 2016. Together, we offer one of the industry's most comprehensive services portfolios designed to modernize business and technology to deliver the outcomes that matter most to our clients.

Harness the Power of Amazon Compute Capacity Enhanced With Advanced Management and Operations Expertise

NTT DATA Cloud On Demand with Amazon Web Services

NTT DATA Services
formerly Dell Services

Cloud solutions powered by Amazon

Committed to providing superior services for industry-leading public cloud infrastructure, NTT DATA and Amazon Web Services (AWS) have partnered together to offer a complete suite of cloud services. AWS provides a comprehensive cloud portfolio including Amazon Elastic Compute Cloud (EC2), Amazon Simple Storage Service (S3) and Amazon Relational Database Service (RDS) — all of which can utilize NTT DATA Cloud Services and other NTT DATA offerings for added value.

With the world's largest public cloud compute capacity, AWS provides the breadth and depth of services to support any cloud workload. Together, NTT DATA and Amazon deliver real business value by blending offers and industry expertise to build unique cloud solutions. By combining our cloud expertise with compute and storage services from AWS, you get world-class solutions that can rise to any challenge, such as today's high cost of disaster recovery and backup. Whether your organization is a large enterprise or a new startup, we can get services up and running in as little as 15 minutes — and easily scale usage up or down to meet changing needs.

Get freedom of choice with our vast cloud partner ecosystem

NTT DATA takes the uncertainty out of the cloud with a client-centric approach to help your organization take full advantage of the cloud. Whether you need a developer-friendly public environment, a mission-critical single-tenant private cloud or a colocation solution, our partner ecosystem combined with exclusive offerings provide a wide range of solutions to choose from — allowing us to match your specific business needs to the most appropriate cloud solution. NTT DATA blends intellectual property with a wide range of partner technologies to deliver unique, optimal performance based on your application needs and the business outcomes you demand. This means simple purchase logistics, uncomplicated vendor relationships and the confidence of NTT DATA services and support, whether you have one cloud platform or many.

amazon web services | Partner Network

ADVANCED CONSULTING PARTNER

Key benefits:

- Robust end-to-end portfolio
- Proven vertical expertise
- Simple, unified experience
- Trusted compute capacity leader
- Broad and deep portfolio of services
- Global infrastructure
- Comprehensive suite of storage, backup and disaster recovery offerings

Simplify management and support with NTT DATA

NTT DATA can also provide comprehensive and proactive management of your cloud-based operating systems and applications through managed cloud services. Once your cloud platform is up and running, Managed Cloud Services can provide support for your clouds' operating systems and applications with flexible levels of coverage.

AWS platform

Offer	Description
Amazon EC2	Web service that provides resizable compute capacity in the cloud. Amazon EC2's simple web service interface allows you to obtain and configure capacity with minimal friction. It also provides complete control of your computing resources on Amazon's proven computing environment. Amazon EC2 changes the economics of computing by charging you only for capacity that you actually use.
Amazon S3 Amazon CloudFront	Storage for the internet that provides a simple web services interface that can be used to store and retrieve any amount of data, at any time, from anywhere on the web.
	Web service for content delivery that integrates with other AWS offerings to give you an easy way to distribute content to end users with low latency, high data transfer speeds and no required minimum commitments.
Amazon RDS	Web service that makes it easy to set up, operate and scale a relational database in the cloud. It provides cost-efficient and resizable capacity while managing time-consuming database administration tasks, so you can focus on your applications and business.
